

RE-RUN

RUN. REACT. REPEAT.

RE-RUN is a pixel-art college runner built with Godot 4.3. Run through a procedurally continuing campus track, collect coins and knowledge, avoid hazards, answer technical quiz terminals, and defeat the final-exam boss.

Requirements

Godot 4.3 or newer. Windows, Linux, or macOS. The game uses a 480 x 270 pixel viewport with integer canvas scaling.

Run The Game

Open the project folder in Godot and press Play Project. The main scene is `Scenes/UI/main_menu.tscn`. From the parent `CollegeRun` folder on Windows, `PLAY_GAME.bat` launches the project automatically.

Controls

Action	Keys
Move / run	A, D, Left Arrow, Right Arrow
Jump / double jump	Space, W, Up Arrow
Slide	S, Down Arrow
Slash / action	J, F, Z, or Left Click
Pause	P or Escape
Quick restart	R while paused or after game over

Gameplay

- Collect coins to increase the score.
- Collect knowledge and memory pickups for educational facts and quiz advantages.
- Use hints and lifelines during technical quiz encounters.
- Avoid spikes, pipes, barriers, enemies, and exam attacks.
- Reach the final exam and answer enough questions correctly to pass.
- Choose a runner from the college roster before starting a run.

Project Layout

Scenes/UI - Main menu and in-game HUD

Scenes/Levels - Playable level scenes

Scenes/Objects - Hazards, enemies, pickups, terminals, and boss objects

Scenes/Player - Player scene

Scripts/UI - Menu, HUD, and settings logic

Scripts/Objects - Gameplay object behavior

Assets - Pixel art, audio, fonts, and imported resources

Text Layout

Long quiz questions, facts, runner descriptions, and modal headings wrap inside their panels. Compact HUD counters are clipped to their available space so text stays inside its container.

Development

Use the Godot editor to edit scenes and scripts. The `.godot/` directory is local editor/import cache and is ignored by `.gitignore`.
